PROJECTS

MyMovies API

Full Stack Immersion, Career Foundry (1/2022 – 3/2022)

- Programmed a REST API interacting with Mongo DB.
- Incorporated data about movies collection: title, description, director, genre.
- Ensured users could create an account, access and save information about their favourites movies.

Tools:

- JavaScript
- Node.js
- Express
- MongoDB

The API is deployed on Heroku https://mymovie-backend-api.herokuapp.com/.

MyMovies-Client

Full Stack Immersion, Career Foundry (2/2022 – 3/2022)

- Composed a client side application for its existing server-side code (myMovies)
- Tested fetching with Postman
- Integrated React library with React Redux and Bootstrap for styling and responsiveness
- Aided other developers with preliminary issues

Tools:

- MongoDB
- Express
- React
- Node.js

The app is deployed on Netlify https://624b0be321937b090192e2e0--my-awesome-movies.netlify.app/.

Meet-App

Full Stack Immersion, Career Foundry (3/2022 – 4/2022)

- Programmed serverless, progressive web application (PWA)
- Developed through test-driven development (TDD) technique
- Secured the app worked both online and offline
- Acquired upcoming events for a selected city the Meetup API
- Advanced project deliverables through teamwork

Tools:

- JavaScript
- HTML
- CSS

The app is deployed on Github Pages https://moni-tu.github.io/Meet-app/.
